

# ***SAP OMSA***

## ***ORDER MANAGEMENT FOR SOURCING AND AVAILABILITY***

### **CONCEPT**

- Centralised availability tool
- Consolidates stock availability from various inventory management systems
- Provides real-time availability updates to request systems (e.g. a webshop) and reserves items for customers
- Uses key performance indicators (KPIs) to determine the best fulfillment location for each order

### **BENEFITS**

- Ideal for managing multiple inventory systems (dropshippers, various ERPs, etc.), as OMSA serves as the central source for availability data.
- Reduces the risk of overselling (when more stock is sold than is actually available) by enabling live reservations, eliminating the possibility of delays.
- Easy integration with shop systems via an API (Application Programming Interface), thanks to a cloud-based architecture. RBOmnishore has even successfully connected OMSA to a Shopify store.
